# **INTRODUCTION**

## **e-SV™ SERIES - SPECIAL VERSIONS**

### **Introduction**

Our customers are central to our business. Many years of collaboration with them across the different markets and all over the world has taught us that specifically designed pumps are required to handle special applications or to fulfill particular installations. It is essential to ensure top performance of the systems and continuous quality of the production. Therefore Lowara has developed a wide range of special versions of its vertical multistage e-SV™ to give an appropriate and dedicated solution to special applications and installations in the industry or in the building services market.

### **Pump design**

Non-self priming, vertical multistage, high pressure centrifugal pump, with suction inlet and outlet of the same identical nominal diameters, coupled to a standard motor. Horizontal installation also available, see specific section.

### **Drive**

**Without speed control:** Electric short-circuit squirrel-cage motor (TEFC), enclosed construction, air-cooled, three-phase, 2-pole and 4-pole, efficiency class **IE2/IE3** from 0,75kW (compliant with Regulation (EC) no. 640/2009 and IEC 60034-30).  
Single-phase version up to 2,2 kW (with built-in automatic reset overload protection up to 1,5kW).

**With Hydrovar® speed control system:** A special version of e-SV™ which becomes an intelligent, variable speed system. Ideal for single pumping solution or multiple pumping set solution (up to 8 pumps). See specific section of e-SVH – Hydrovar® fitted.

For more motor options see the specific motors section.

### **Special versions and options index**

The first part of this booklet will cover the following special versions:

- e-SV™ – High Pressure - 50/60 Hz
- e-SV™ – Low NPSH - 50/60 Hz
- e-SV™ – High Temperature - 150°C & 180°C
- e-SV™ – with Hydrovar® - SVH
- e-SV™ – 4-pole version - 50/60 Hz
- e-SV™ – Reducing footprint - 50/60 Hz
- e-SV™ – Horizontal version - 50/60 Hz

The second part of this booklet will cover the following sections:

- Motors configuration and standard options
- Dry-running sensor
- i-Alert device
- Tests and certifications
- Accessories

### **Documentation and support**

Pump selection software, visit:  
<http://www.xylect.com>

Documentation is also available on:  
<http://www.lowara.com>

Visit us for information including video, commercial leaflet, brochure, other technical catalogues, 2D and 3D drawings, IOM.

## e-SV™ SERIES - SPECIAL VERSIONS

### COMPATIBILITY MATRIX

The following table describes the recommended compatibility between the special versions of e-SV™.

SPECIAL VERSIONS	Low NPSH	High pressure	High Temperature 150° & 180°C	Version with Hydrovar®	Reducing footprint "R"	Horizontal version	4 Pole
Low NPSH		•	•	•	•	•	△
High pressure	•		N/A	•	N/A	•	△
High Temperature 150° & 180°C	•	N/A		N/A	N/A	N/A	△
Version with Hydrovar®	•	•	N/A		•	•	•
Reducing footprint "R"	•	N/A	N/A	•		△	•
Horizontal version	•	•	N/A	•	△		•
4-Pole	△	△	△	•	•	•	

\* = Available.    △ = su richiesta.    N/A = not available.

sv-spec-en\_b\_tc

As a global supplier, Lowara can design specific solutions according to the requirements of the application or of the installation. For example, Lowara's custom-built solutions can handle more aggressive liquids or heavy duty applications. For more information, refer to the Lowara sales network.

tab-comp-sv-en\_b\_tm

The above table indicates the compatibility of materials depending on the pumped liquid. Check the specific weight of the liquid or the viscosity as this could affect the power input of the motor and hydraulic performance. For further details, please contact the sales network.

# **HIGH PRESSURE (50/60 Hz)**

## e-SV™ SERIES - HIGH PRESSURE 50/60 Hz

### Background and context

In the water treatment industry (Ultra or Nano filtration, reverse osmosis) in the washing and cleaning industry (High pressure washdown systems) or with boiler-feed application, high pressure is mandatory to ensure consistency in the performance of the systems. Therefore Lowara has developed e-SV™ High Pressure: a wide range of pumps and pump systems able to deliver robust and durable performances up to 45 bar.

### Benefits of e-SV™ HIGH PRESSURE

**Versatile range:** e-SV™ High pressure is available in two different configurations: single pump solution or tandem pump solution (two pumps in series). If the inlet pressure value is already high, Lowara delivers a single pump able to withstand the high inlet pressure and deliver up to 45 bar pressure at the outlet. With applications where the high pressure has to be delivered starting from atmospheric pressure in the inlet, Lowara delivers the tandem solution able to deliver up to 45 bar pressure at the outlet of the system.

**Long lasting performances:** e-SV™ High Pressure benefits of a particular design of the sleeve to withstand the pressure without any limitation in the inlet pressure but maximum 45 bar measured at the outlet. The specific balanced mechanical seal and the balanced design of the impeller and the hard material intermediate bush bearing allows e-SV™ withstanding up to 45 bar without stressing the motor and the pump components, with a direct consequence on the reduction of the life cycle cost.

**Easy installation and maintenance:** e-SV™ High Pressure in tandem system is composed of two identical standard e-SV™ High Pressure pumps making replacement easy and cost-effective. e-SV™ High Pressure in tandem has to be ordered as two single e-SV™ High Pressure pumps together with the specific accessories for the installation (see specific accessories section).

### Code identification

e-SV™ High Pressure design is identified with a "P" in the product codification of the whole e-SV™ range.

Example: 3SV13P015T

P = High Pressure version.

### Special features / product benefits

- **Double sleeve design** to withstand high pressure up to 45 bar.
- **Balanced standard mechanical seal** (EN12756) on all models. **Easy to replace, without removing the motor** from 5,5 kW.
- **Hard material intermediate bush bearing** (Tungsten Carbide) to withstand heavy duty applications.
- **Balanced impeller design** to reduce axial thrust for longer standard motor bearing life.
- Wide range of size to cover all requested duty points: from 1SV to 125SV.
- **IE2/IE3 standard motors**, 3-phase, 2-poles from 0,75 kW to 55 kW with blocked bearing **to support maximum thrust without limiting inlet pressure.**
- **i-Alert device** to reduce life cycle costs by increasing Mean time between Failures (MTBF).

### Special configurations

e-SV™ High Pressure offers a wide range of configurations:

- Material execution. See Material section.
- Mechanical seal and rubbers options. See Mechanical seal and rubber section.
- Motors options and configuration. See Motor section.
- Hydrovar® drive fitted. See e-SVH – Hydrovar® fitted section.

## e-SV™ SERIES - HIGH PRESSURE 50/60 Hz

### Technical characteristics - Design

- 1: Double sleeve design for optimized resistance to pressure up to 45 bar.
- 2: Balanced mechanical seal to withstand high pressure.

### Operating characteristics for single pump

For the hydraulic performances of the single pump, please refer to the standard catalogue of e-SV™.

**HIGH  
PRESSURE**

### 125SV..P SERIES - HIGH PRESSURE OPERATING CHARACTERISTICS AT 60 Hz, 2-POLE

**HIGH PRESSURE 60HZ**

These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

# **LOW NPSH (50/60 Hz)**

## e-SV™ SERIES - LOW NPSH 50/60 Hz

### Background and context

In industrial applications, often pumps are exposed to heavy duty installations and conditions, such as pumping high temperature liquids (boiler-feed), poor inlet pressure conditions or high flow rate applications. In these cases, constant and durable pump operation is often compromised by cavitation. Therefore Lowara has developed e-SV Low NPSH versions: a pump which delivers a definitive and valuable solution to solve cavitation issues in installation.

### Benefits of e-SV™ Low NPSH

**Consistent operation:** the special design of the first initial stage together with a specific impeller design allows e-SV™ Low NPSH versions to improve its suction capacity. Even in critical suction conditions, the pump is able to deliver consistent and constant operation on the whole application range.

**Long lasting performances:** e-SV™ Low NPSH design ensures consistency in its operation. The specific design of e-SV™ Low NPSH versions saves the pump of the cavitation: the components in the pump are not submitted to stress, decreasing the need of repetitive maintenance and reducing the life cycle cost of the pump.

**Easy installation:** e-SV™ Low NPSH versions is easy to install and allows saving space. Where traditional pumps will need to have a tank to facilitate the suction conditions, the specific design of e-SV™ Low NPSH version allows installing the pumps without any additional accessories on the suction side. A compact design where reduced spaces are favored.

### Code identification

e-SV™ Low NPSH design is identified with a "L" in the product codification of the whole e-SV™ range.

Example: 3SV13FL015T

**L** = Low NPSH version.

### Special features / product benefits

- **Specific first stage design** to maximize suction conditions.
- **Easy-to-replace standard mechanical seal** (EN12756) on all models from 5,5 kW for easy maintenance **without removing the motor.**
- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve life and ability to withstand heavy duty application on all sizes.
- **Balanced impeller design** (patent pending) to reduce axial thrust for longer standard motor bearing life.
- **Wide range of sizes to cover all requested duty points:** from 1SV to 66SV.
- **i-Alert device** to reduce life cycle costs by increasing Mean time between Failures (MTBF).

### Special configurations

e-SV™ Low NPSH offers a wide range of configurations:

- Material execution. See Material section.
- Mechanical seal and rubbers options. See Mechanical seal and rubber section.
- Motors options and configuration. See Motor section.
- Hydrovar® drive fitted. See e-SVH – Hydrovar® fitted section.

## e-SV™ SERIES - LOW NPSH 50/60 Hz

### Technical characteristics - Design

- 1: Specific initial impeller design to maximize suction abilities.
- 2: Specific initial stage design to enhance suction capabilities of the pump.

**LOW  
NPSH**

## e-SV™ SERIES - HIGH TEMPERATURE (150°C) 50/60 Hz

### Background e contesto

In industrial applications pumps often have to deal with liquids at high temperatures in order to optimise performance for each production process. In these applications, pumps frequently need to be protected from excessive temperatures for the purpose of maintaining high performance levels. That's why Lowara has developed the e-SV™ High Temperature 150°C series: this sturdy pump integrates a mechanical seal normalised with suitable materials for pumping liquids at high temperatures.

### Benefits of the e-SV™ High Temperature 150°C series

#### Long-term mechanical seal performance:

Thanks to the special design of its housing, the seal is protected from the stress caused by high temperatures by means of a "natural" lubrication process which is triggered by the pumped liquid itself. Furthermore, the balanced mechanical seal and the high quality of the elastomers used in the e-SV™ High Temperature 150°C series assure excellent long-term performance, even in the harshest operating conditions.

**Solidity:** e-SV™ High Temperature 150°C pumps are hard-wearing thanks to the hard metal bush supports which can withstand high temperature applications up to 150°C and pressure values up to PN25 (see the pressure-temperature diagram).

#### Easy and cost-effective maintenance:

the mechanical seal installed in e-SV™ High Temperature 150°C pumps is a standard balanced mechanical seal (EN12756) which makes it cheap and easy to replace.

### Identification code

e-SV™ High Temperature 150°C models are identified by the letter "**H**" in the standard identification code of the e-SV™ product range.

Available in the following versions:

**FH** in AISI 304 (for 1-22SV).

**GH** in AISI 304/Cast iron (for 33-125SV).

**NH** in AISI 316 (for all versions).

Example: 3SV13**FH**015T

**H** = High Temperature 150°C.

### Special features / benefits

- **Special design of the mechanical seal chamber** for high temperature applications.
- **Easy-to-replace standard mechanical seal** (EN12756) on all models from 5,5 kW for easy maintenance **without removing the motor**.
- **Hard metal intermediate bush support** (tungsten carbide) to increase the duration and capability of operating in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust and extend the lifetime of standard motor bearings.
- **IE2/IE3 standard motors**, three-phase, 2-pole, from 0,75 kW to 55 kW with fixed bearing **to endure extreme thrusts without limiting inlet pressure**.

### Special configurations

A wide range of configurations is available for e-SV™ High Temperature 150°C pumps:

- Materials used. See the "Materials" section.
- Options for mechanical seals and rubber gaskets. See the "Mechanical seals and rubber gaskets" section.
- Motor and configuration options. See the "Motor" section.

**e-SV™ SERIES - HIGH TEMPERATURE (150°C)  
50/60 Hz**

**Technical specifications - Design**

- 1: Special design of the mechanical seal chamber, assuring adequate lubrication triggered by the pumped liquid, thus extending product lifetime.
- 2: Balanced mechanical seal in order to withstand high pressures and temperatures.

**Operating characteristics**

For the hydraulic performances, please refer to the standard catalogue of e-SV™.

## e-SV™ SERIES - "BOILER" (180°C) 50/60 Hz

### Background and context

In applications where industrial boilers are used, pumps often have to deal with liquids at high temperatures. In these installations, pumps need to be specifically cooled down from excessive temperatures in the mechanical seal area, in order to ensure high performance levels. That's why Lowara has developed the e-SV™ "Boiler" 180°C. This pump has a standard mechanical seal which extends its lifetime even when pumping liquids at very high temperatures.

### Benefits of e-SV™ "Boiler" 180°C

#### Long-term mechanical seal performance:

Thanks to the special design of its housing, the seal is protected from the stress caused by high temperatures by means of a "natural" lubrication process which is triggered by the pumped liquid itself, and a cooling system which uses the air in the room. A degasser is also installed at the top of the pump in order to automatically eliminate the air in the seal area. The temperature decreased to 100°C in the mechanical seal area, together with the balanced mechanical seal and the high quality of the elastomers of the e-SV™ "Boiler" 180°C pump, assure excellent long-term performance, even in the harshest operating conditions.

**Solidity:** e-SV™ "Boiler" 180°C pumps are designed to operate in any application at temperatures up to 180°C. Pump body and upper chamber in cast AISI 316, balanced mechanical seal, high quality elastomers, hard metal bush supports, double outer jacket: these are the key features of the e-SV™ "Boiler" 180°C. To select the correct pump, consult the pressure-temperature diagram.

**Easy and cost effective maintenance:** the mechanical seal installed in e-SV™ "Boiler" 180°C pumps is a standard balanced mechanical seal (EN12756) which makes it cheap and easy to replace.

### Identification code

e-SV™ "Boiler" 180°C models are identified by the letter "**B**" in the standard identification code of the e-SV™ product range and are available in AISI 316.

Example: 3SV13NB015T

**B** = "Boiler" 180°C.

### Special features / benefits

- **Special design of the final stage of the pump and of the mechanical seal chamber** for high temperature applications.
- **Pump body and upper chamber in cast AISI 316.**
- **Stainless steel PN25 degasser.**
- **Hard metal intermediate bush support** (tungsten carbide) to increase the duration and capability of operating in extreme conditions, available on all sizes.
- **Balanced impeller design** to reduce axial thrust and extend the lifetime of standard motor bearings.
- **Double outer jacket** to withstand pressures of up to 25 bar and temperatures of up to 180°C.
- **IE2/IE3 standard motors**, three-phase, 2-pole, from 0,75 kW to 55 kW with fixed bearing **to endure extreme thrusts without limiting inlet pressure.**

### Special configurations

A wide range of configurations is available for e-SV™ "Boiler" 180°C pumps:

- Materials used. See the "Materials" section.
- Options for mechanical seals and rubber gaskets. See the "Mechanical seals and rubber gaskets" section.
- Motor and configuration options. See the "Motor" section.

**e-SV™ SERIES - "BOILER" (180°C)  
50/60 Hz**

**Technical specifications - Design**

- 1: Balanced mechanical seal in order to withstand high pressures and temperatures.
- 2: Special upper chamber design with recirculation of the air in the room which lowers the temperature of the mechanical seal.
- 3: Degasser to eliminate the air in the mechanical seal area.
- 4: Double outer jacket design to withstand high pressures.

**e-SVH  
WITH HYDROVAR®  
(50 Hz)**

**e-SVH  
HYDROVAR®**

## e-SV™ SERIES - VERSION WITH HYDROVAR® 50 Hz

### Background and context

In all areas of application, such as building services, industry, agriculture and air-handling, the demand for intelligent pumping systems is constantly growing. There are many advantages: reduced cost for pump life cycle, lower environmental impact, longer lifetime of pipes and unions. That's why Lowara has developed the e-SVH: an intelligent pumping system which assures high level performance with energy consumption tailored to demand.

### Benefits of e-SVH with Hydrovar®

**Saving:** e-SVH transform e-SV™ pumps into variable speed intelligent pumping systems. Thanks to the Hydrovar® system, the speed of each pump varies so as to maintain a constant flow or pressure. The pump only receives the energy required, thus allowing considerable savings, especially for those systems in which demands varies during the day.

**Easy installation and space-saving:** e-SVH save time and space during installation. Installed directly on the motor, which cools it down, the e-SVH do not require a control panel or an external control or safety device. Thanks to the Hydrovar® technology, there is no need for large diaphragm tanks to complete installation.

**Standard motors:** e-SVH are fitted with three-phase standard TEFC motors with insulation class F and power outputs of up to 22 kW. Wall-mounted versions with a maximum power output of 45 kW are also available.

### Identification code

e-SVH models are identified by the letter "H" in the standard identification code of the e-SV™ product range.

Example: 3SVH13F015T

**H** = with integrated Hydrovar®.

### Special features / benefits

- **There is no need for additional pressure sensors:** e-SVH are fitted with a pressure transmitter or differential pressure transmitters, depending on the application.
- **There is no need for special pumps or motors.**
- **There is no need for bypass or safety systems:** With Hydrovar® the pump immediately switches off when demand drops to zero or when it exceeds maximum pump capacity. This makes it unnecessary to install additional safety devices.
- **Anti-condensation device:** All units are fitted with anti-condensation devices which switch on when the pump is in standby in order to prevent condensation forming in the unit.
- **i-Alert device** to reduce the costs for each life cycle, thus increasing the mean time between failures (MTBF).

### Special configurations

e-SVH have the same range of configurations as the standard e-SV™ series.

- Materials used. See the "Materials" section.
- Options for mechanical seals and rubber gaskets. See the "Mechanical seals and rubber gaskets" section.
- Motor and configuration options. See the "Motor" section.

## OPERATING PRINCIPLE

The basic function of the Hydrovar® device is to control the pump to meet the system demands.

### HYDROVAR® performs these functions by:

- 1) Measuring the system pressure or flow via a transmitter mounted on the pump's delivery side.
- 2) Calculating the motor speed to maintain the correct flow or pressure.
- 3) Sending out a signal to the pump to start the motor, increase speed, decrease speed or stop.
- 4) In the case of multiple pump installations, Hydrovar® will automatically provide for the cyclic changeover of the pump's starting sequence.

In addition to these basic functions, Hydrovar® can do things only by the most advanced computerised control systems, such as:

- Stop the pump(s) at zero demand.
- Stop the pump(s) in case of water failure on the suction side (protection against dry running).
- Stop the pump if the required delivery exceeds the pump's capacity (protection against cavitation caused by excessive demand), or automatically switch on the next pump in a multiple series.
- Protect the pump and motor from overvoltage, undervoltage, overload and earth fault.
- Vary the pump speed acceleration and deceleration time.
- Compensate for increased flow resistance at high flow rates.
- Conduct automatic test starts at set intervals.
- Monitor the converter and motor operating hours.
- Display all functions on an LCD in different languages (Italian, English, French, German, Spanish, Portuguese, Dutch).
- Send a signal to a remote control system which is proportional to the pressure and frequency.
- Communicate with another Hydrovar® or control system via an RS 485 interface.

## TYPICAL EXAMPLE OF ENERGY SAVINGS

System: 22SV07F75T vertical multistage electric pump with 7,5 kW motor equipped with Hydrovar®, 70 m head. 19 hour/day operation.

Application: maintaining a constant pressure as the flow rate varies.

The curves show the performance with one pump running to the minimum and maximum speed.  
These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{s}$ .

**92SVH SERIES  
OPERATING CHARACTERISTICS AT 30..50 Hz**

The curves show the performance with one pump running to the minimum and maximum speed.  
These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{s}$ .

## e-SV™ SERIE - 4-POLE VERSION 50/60 Hz

### Background and context

In the building services market, reducing the level of noise of the pumping equipment is one of the main goals of architects and facilities managers to bring more comfort to our life. In water boosting systems or in cooling and heating installations, often architects and contractors are looking at quiet operational systems. Therefore Lowara has developed the e-SV™ series with 4 pole versions: a pump which delivers a quiet and reliable solution to the most noise sensitive applications.

### Benefits of e-SV™ 4 pole

**Low level of noise:** e-SV™ 4 pole, by reducing the speed of the pump by 50% allows delivering very quiet operation.

**Wide range of performances:** e-SV™ 4 pole is available from 1SV to 125SV, from 0,25 kW to 15 kW. e-SV™ 4 pole keeps the same level of efficiency of the standard e-SV™ series.

**Increased performance with Hydrovar®:** e-SV™ 4 pole combined with Hydrovar®, the variable speed driver developed by Lowara, allows an additional reduction of the noise of the pumping system. Hydrovar®, by smoothing the ramping up and down of the pump, reduces the speed of the water in the piping and as a consequence the noise made by the full installation.

### Code identification

e-SV™ 4 pole version is identified with a "4" in the product codification of the whole e-SV™ range.

Example: 3SV11F002**4**T

**4** = 4 pole version.

### Special features / product benefits

- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve life and ability to withstand heavy duty application on all sizes.
- **IE2 standard motors**, 3-phase, 4-pole from 0,75 kW to 15 kW.
- **Hydrovar® drive available on all models to allow e-SV™ 4 pole into an intelligent, variable speed system.** Ideal for single pumping solution or multiple pumping set solution (up to 8 pumps).
- **Easy-to-replace standard mechanical seal** (EN12756) on all models from 5.5 kW for easy maintenance **without removing the motor.**
- **i-Alert** device to reduce life cycle costs by increasing Mean time between Failures (MTBF).

### Special configurations

e-SV™ 4 pole offers the same range of configuration of the standard e-SV™ series.

- Material execution. See Material section.
- Mechanical seal and rubbers options. See Mechanical seal and rubber section.
- Motors options and configuration. See Motor section.
- Hydrovar® drive fitted. See e-SVH – Hydrovar® fitted section.

# **REDUCING FOOTPRINT (50/60 Hz)**

## e-SV™ SERIES - REDUCING FOOTPRINT 50/60 Hz

### Background and context

In industry or in the building services market, reducing footprint of pumping equipment is one of the main goals of architects and manufacturing layout designers. They look for compact solutions which help to save space on installation, such as compact water supply installation, compact water booster sets and closed loop circuits. Therefore Lowara has developed e-SV™ Reducing footprint: a pump or booster set which delivers a compact and original solution to the most critical footprint size.

### Benefits of e-SV™ Reducing Footprint

**Compact design:** e-SV™ Reducing the footprint offers up to 50% saving in the plant room dedicated usually for a traditional vertical multistage pump with suction and discharge ports designed inline.

**Versatile design:** e-SV™ Reducing footprint offers many different configurations with the delivery port above the suction port with 4 adjustable positions. This specific design of the pump allows installing e-SV™ Reducing footprint everywhere, even at a close proximity to a wall.

**High level performances:** e-SV™ Reducing footprint keeps the same level of performances of the e-SV™ range from size 1SV to 22SV. e-SV™ Reducing footprint is available with round flanges up to PN25.

### Code identification

e-SV™ Reducing footprint design is identified with a "R" in the product codification of the whole e-SV™ range.

Example: 3SV13R015T

**R** = Reducing footprint.

### Special features / product benefits

- Specific superposed design of the inlet and outlet allowing savings in up to 50% space.
- **Easy-to-replace balanced standard mechanical seal** (EN12756) on all models from 5,5 kW for easy maintenance **without removing the motor.**
- **Hard material intermediate bush bearing** (Tungsten Carbide) to improve life and ability to withstand heavy duty application on all sizes.
- **Balanced impeller design** (patent pending) to reduce axial thrust for longer standard motor bearing life.
- Wide range of size to cover all requested duty points: from 1SV to 22SV.
- **IE2/IE3 standard motors**, 3-phase, 2-poles from 0,75 kW to 55 kW with blocked bearing **to support maximum thrust without limiting inlet pressure.**
- **i-Alert** device to reduce life cycle costs by increasing Mean time between Failures (MTBF).

### Special configurations

e-SV™ Reducing footprint offers the same range of configuration of the standard e-SV™ series.

- Material execution. See Material section.
- Mechanical seal and rubbers options. See Mechanical seal and rubber section.
- Motors options and configuration. See Motor section.
- Hydrovar® drive fitted. See e-SVH – Hydrovar® fitted section.

# **HORIZONTAL VERSION**

## e-SV™ SERIES - HORIZONTAL VERSION 50/60 Hz

### Background and context

In some applications where room is reduced vertically, it is mandatory to have some pumps systems able to deliver high pressure performances together with a limited occupied vertical space. Therefore Lowara proposes the full range of e-SV™ in the horizontal position: a pump which delivers from a vertical space saving solution together with the high performance of the e-SV™ series.

### Benefits of e-SV™ horizontal version

**Reduced use of the vertical space:** e-SV™ Horizontal version reduces the space usually used vertically by the traditional vertical multistage pumps thanks to a specific range of accessories which allows the installation of the pump in a horizontal position.

**Easy installation:** any e-SV™ pumps can be installed in a horizontal position. Lowara has developed some specific accessories, which according to the pump model and motor, allow to convert any e-SV™ vertical multistage to a horizontal installation.

### Code identification

There is no specific code identification for e-SV™ Horizontal version, since it's a different installation of the standard e-SV™ series.

### Special features / product benefits

By being a different installation of the e-SV™ series, the special features and products benefits of e-SV™ Horizontal version are the same as the standard e-SV™ series.

Lowara recommends to use the R version of e-SV™ for horizontal installation in order to drain out the air diluted in the liquid.

### Special configurations

e-SV™ Horizontal version offers the same range of configuration of the standard e-SV™ series.

- Material execution. See Material section.
- Mechanical seal and rubbers options. See Mechanical seal and rubber section.
- Motors options and configuration. See Motor section.
- Hydrovar® drive fitted. See e-SVH – Hydrovar® fitted section.

# MOTORS

## e-SV™ SERIES MOTORS AT 50 Hz, 2-POLE

Standard supplied SV electric pumps are equipped with Standard motors.

- **Standard supplied IE2/IE3 three-phase surface motors  $\geq 0,75$  kW are compliant with Regulation (EC) no. 640/2009 and IEC 60034-30.**
- Short-circuit squirrel-cage motor (TEFC), enclosed construction with external ventilation.
- IP55 protection.
- Class 155 (F) insulation.
- Performance according to EN 60034-1.
- Standard voltage.
- Cable gland with standard passage dimensions according to EN 50262 (metric thread).
- **Single-phase** version: 220-240 V 50 Hz with built-in automatic reset overload protection up to 1,5 kW. For higher powers the protection must be provided by the user.
- **Three-phase** version 220-240/380-415 V 50 Hz for power up to 3 kW. 380-415/660-690 V 50 Hz for power above 3 kW. Overload protection to be provided by the user.
- **PTC** included in motors from 30 to 55 kW.

### Standard options surface motors

In addition to a wide range of motors and special voltages, Lowara offers a wide range of standard options to cover all applications linked with the installation of the vertical multistage pumps e-SV™:

#### High efficiency:

High efficiency IE3 motors  
IE2 motors with variable speed drive Hydrovar®  
Nema Premium or Nema standard

#### Non standard ambient installation:

Ambient temperature above 40°C up to 60°C  
Insulation class: IP56 – IP65  
Space heaters  
Tropicalization  
Fan cover with canopy

#### CERTIFICATIONS

UL recognized  
Marine certification

#### Other:

Insulated bearings  
Service factor (1.15)

#### Motor protection:

PTC  
PTO  
PT100  
PTC in the bearings (only on large sizes)  
Lowara keeps the right to supply motors from other brand to satisfy some of the requests.

## e-SV™ SERIES MOTORS AT 60 Hz, 2-POLE

Standard supplied SV electric pumps are equipped with Standard motors.

- **Standard supplied IE2/IE3 three-phase surface motors  $\geq 0,75$  kW are compliant with Regulation (EC) no. 640/2009 and IEC 60034-30.**
- Short-circuit squirrel-cage motor (TEFC), enclosed construction with external ventilation.
- IP55 protection.
- Class 155 (F) insulation.
- Performance according to EN 60034-1.
- Standard voltage.
- Cable gland with standard passage dimensions according to EN 50262 (metric thread).
- **Single-phase** version: 220-230 V 60 Hz with built-in automatic reset overload protection up to 1,5 kW. For higher powers the protection must be provided by the user.
- **Three-phase** version 2 pole: 220 V  $\Delta$ , 380 V  $Y$ , 60 Hz up to 55 kW. Overload protection to be provided by the user.

### Standard options surface motors

In addition to a wide range of motors and special voltages, Lowara offers a wide range of standard options to cover all applications linked with the installation of the vertical multistage pumps e-SV™:

#### High efficiency:

High efficiency IE3 motors  
IE2 motors with variable speed drive Hydrovar®

#### Non standard ambient installation:

Ambient temperature above 40°C up to 60°C  
Insulation class: IP56 – IP65  
Space heaters  
Tropicalization  
Fan cover with canopy

#### Motor protection:

PTC  
PTO  
PT100  
PTC in the bearings (only on large sizes)

#### CERTIFICATIONS

UL recognized: Nema Premium and Nema standard  
Marine certification

#### Other:

Insulated bearings  
Service factor (1.15)

Lowara keeps the right to supply motors from other brand to satisfy some of the requests.

# **PROTECTION SENSOR AGAINST DRY RUNNING**

## PROTECTION SENSOR AGAINST DRY RUNNING

Sensor for detecting the presence of water based on the optoelectronic principle, therefore non invasive and with no moving parts. The sensor provides an electronic contact to be used to stop the pump in the event of a lack of water in the seal area. The sensor opens the electronic contact after a factory-set delay (10 secs).

The sensor is supplied in a kit complete with 2m of cable, a gasket O-ring EPDM, and a stainless steel adapter.

### The sensor can also be used in the following applications:

- Checking the level in water buffer tanks.
- Checking the level in pressure tanks.
- Checking leaks.

### General using features

- The sensor is suitable for being connected directly on the filling cap of pumps in the e-SV™ series. An adapter cap is supplied for the 33..125SV series.
- Operation is independent of the hardness and conductivity of the water. The sensor is not suitable for detecting frozen liquids.

### Available in different power supply versions:

- 21 ÷ 27 Vac, universal solid state output for 24 Vac external relay.
- 12 ÷ 28 Vdc, open NPN manifold outlet for Hydrovar® inverter.

### Operating principle

Operation is based on the variation of the refractive index on the surfaces. The optic sensor comprises a glass cap with inserted a transmitter and an infrared receiver.

Mirror effect. In the absence of fluid, all the infrared light emitted is internally reflected by the surface of the glass cap of the receiver.

In the presence of fluid, the refractive index of the surface changes. Most of the emitted infrared light is dispersed in the fluid. The receiver receives less light, which causes the signal for presence of water.

## CHARACTERISTIC DATA

- Materials:
    - Body in AISI 316L stainless steel
    - Glass optic cap
    - EPDM gasket
  - Maximum pressure (PN): 25 bar (higher pressures on request).
  - Fluid: clean demineralised water, independent of hardness and conductivity. Compatible with other fluids such as oils (\*).
  - Liquid temperature:  $-20^{\circ}\text{C} \div 120^{\circ}\text{C}$ . Ensure that the fluid always remains above freezing point.
  - Ambient temperature:  $-5 \div +50^{\circ}\text{C}$
  - Continuous duty.
  - Alarm delay: 10 sec, set in the factory.
  - Connector: 3/8", included in the 3/8" – 1/2" adapter cap kit
  - Protection degree: IP55.
  - Electrical specifications:
    - Supply voltage: DC model:  $12 \div 28$  Vdc. AC model:  $21 \div 27$  Vac
    - Sensor maximum absorption: 20mA
    - Load maximum absorption: 50mA
    - DC model outlet: NPN open manifold, maximum 28Vdc, 50mA
    - AC model outlet: solid state outlet for general use in alternating current, maximum  $21 \div 27$  Vac, 50mA
    - Cable, included, type FROR 4 x 0,34 mm<sup>2</sup> (PVC-CEI 20-22) standard length 2m.
    - Cable working temperature:  $-20^{\circ}\text{C} \div +70^{\circ}\text{C}$ , fixed installation
  - Dimensions: 27x 60 mm
- (\* ) To check suitability for operating with a fluid such as oil, contact the Lowara technical support service and supply the characteristics of the fluid.

## CONNECTION DIAGRAMS

### Mechanical installation

The sensor may be fitted directly on the filling cap of e-SV pumps; for the series SV33..92, 125SV it is necessary to fit also a 3/8" – 1/2", included in the kit.

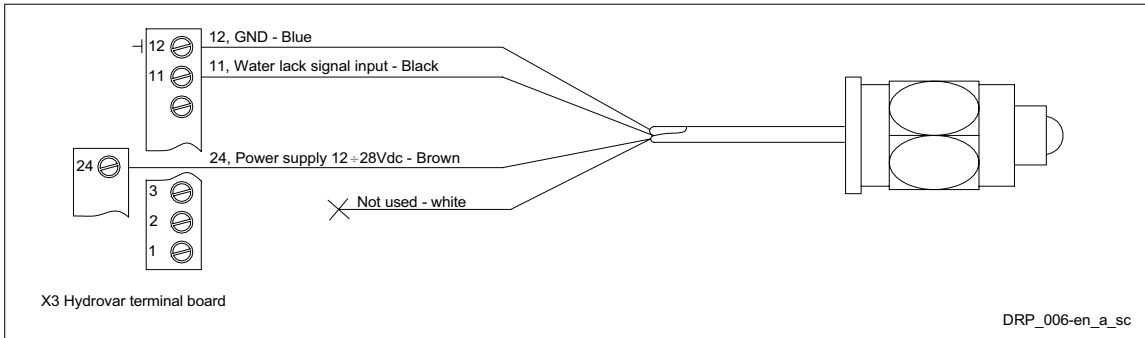

**SENSOR**

## CONNECTION DIAGRAMS

- Direct current power supply 12 ÷ 28Vdc.  
The sensor may be connected:

⇒ To the Hydrovar® directly on the terminal board X3. The sensor opens the NPN contact (black wire) 10 seconds (factory setting) after the water lack signal.

⇒ To a monitoring system (PLC), directly on the terminal board. A load resistance (pull-up) with a minimum value of 1kOhm must be fitted on the outside.

⇒ To a system with a relay and direct current power supply. A recirculating (free-wheeling) diode must be fitted on the outside.

- General use, power supply 21 ÷ 27Vac.  
The sensor may be connected to a system with a relay and alternating current power supply.

- For protection sensor code kit, please see the accessories section.

# **i-ALERT™**

**e-SV™ SERIES**  
**i-Alert™ - CONDITIONAL MONITORING**

*i-Alert™ – The patent-pending condition monitoring device, originally intended for use within the Industrial Process market, is now incorporated within the e-SV product offering.*

*The device's onboard condition monitoring intelligence serves to reduce life cycle costs by increasing Mean time between failures (MTBF).*

**Features**

- Continuously measures vibration – observing responses from the motor and the pump during operation.
- If pre-set limits are exceeded – the monitoring device alerts the end-user via blinking red LED. This allows the pump operator to make changes to the process or the pump before a catastrophic failure occurs.
- The i-Alert™ is also equipped with a single green LED to indicate when it is operational and has sufficient battery life.
- Both blinking green and red LED lights would be seen by operator or others during scheduled inspections or walk-bys.

**Alarm Mode**

- The condition monitor enters alarm mode when vibration limits are exceeded over two consecutive readings within a ten minute period. Alarm mode is indicated with two red flashing LEDs within two second intervals.
- Vibration limit: 100% increase over baseline or 0.5 in/sec max vibration levels. (Hydraulic Institute Standards, ISO 10816).
- Minimum vibration level to cause alarm mode is 3.175 mm/sec to minimize nuisance tripping.

**Setup**

- The condition monitor is ready for activation when the pump is running and has reached a steady flow, pressure, and temperature
- Place a small magnet on the condition monitor over the ITT logo and then remove it, as this example shows
- When the condition monitor is activated it:
  1. Displays a series of red LEDs followed by a solid green LED.
  2. Collects eight samples that are spaced one second apart.
  3. Averages these readings to establish the baseline vibration level.
  4. Flashes a green LED after approximately twelve seconds.

**e-SV™ SERIES**  
**i-Alert™ - CONDITIONAL MONITORING**

**Monitoring Mode**

- Measurement intervals for the condition monitor during normal operation and when the monitor is in alarm mode:

Mode	Measurement Interval
Normal (Green)	Five minutes
Alarm (Red)	Two minutes

- When the i-Alert™ measures a reading beyond the specified vibration limit, the appropriate red LED flashes. After the process or pump condition that causes the alarm is corrected, the i-Alert™ returns to normal mode after one normal-level measurement.

**Possible Causes of Vibration**

- Entrained air into the process fluid.
- Turbulence process flow within the system.
- Worn bearings (pump or motor)
- Water hammer
- Loose anchor / hold-down bolts
- Bent shaft / misalignment
- Harmonic vibration
- Unbalanced rotating equipment
- Many additional symptoms may cause elevated vibrations.

**Battery Life**

- The i-ALERT™ Condition Monitor battery is not replaceable. You must replace the entire unit once the battery runs out of power. Battery life is not covered by the standard pump warranty.

Mode	Battery Life
Normal (Green)	3 to 5 years
Alarm (Red)	1 year

**Product Approval Standards**

**CSA certification**

Intrinsically safe for:

- Class I, Div. 1, Groups A, B, C, D
- Class II, Div. 1, Groups E, F, G
- Class III
- Certified to Canadian and US requirements

**Explosion-proofing standards**

All explosion-proof products for use in explosive atmospheres are designed in compliance with one or more of the following approvals:

- EN, ATEX Directive 94/9/EC
- FM According to NEC
- Class 1 Div 1 Groups “C”, and “D”
- Class 2 Div 1 Groups “E”, “F”, and “G”
- Class 3 Div 1 Hazardous Locations

**ATEX/IECEx:**

- Group: IIC
- Category: Ex ia
- Temperature Class: T4 (for ambient up to 100°C)
- ATEX Marking: Ex II 1 G

- **For i-Alert™ code kit, please see the accessories section.**

# CERTIFICATES

## CERTIFICATES

### Certificates

Description	Additional description	Standard of reference
Compliance of the shipment with order	without test	EN 10204 - 2.1
Compliance of the shipment with order	with non specific tests (material certificat)	EN 10204 - 2.2
CE declaration of conformity	Specific document In case of request after shipping, indicate matriculate number and production date	Machine directive 2006/42/EC
Manufacturer's declaration	Generic declaration for a family without specific indication of the pump data	/
Manufacturer's certificate of quality and quantity	Certification made on specific part numbers to declare the best quality of the processes, material and workforce for the production of the goods	/
<b>3.1 Certificat (documents package)</b> a) Test report ▶ 1A Factory Test Report (see table test 1A) ▶ 1B Lab (see table test 1B) b) List of materials c) Declaration of conformity d) Materials certificate (in contact with H <sub>2</sub> O)		EN 10204 - 3.1
Other certificat/documentation on request (after verification of availability / feasibility)	WRAS, ACS, GOST...	
Duplicate of certification / documentation		

### Test 1A

Description	Additional description	Standard of reference
Factory test report (1)	Q-H curve	ISO 9906 Annex A
Static test	Available only for: FH (no "F")- SH (no "F") - SV	ISO 9906 Annex A

(1) Factory test report not available for all product range. Please contact Customer Service

### Test 1B

Description	Standard of reference
Performance certificate (Q-H curve - group efficiency - and group input power)	ISO 9906 Annex A

### Test NPSH

Description	Standard of reference
NPSH test	ISO 9906 Annex A

### Other Test

# ACCESSORIES

**G/SVH KIT  
TABLE OF SIZES**

SVH series electric pump with hydraulic kit and G/SVH accessories, to realise a single-pump booster set which is quick and easy to install.

The hydraulic kit can be combined with the following SHV electric pumps:

- F versions (in-line ports, round flanges)
- R versions (overlapping ports, round flanges)
- N versions (in-line ports round flanges)
- G versions (in-line ports round flanges)

Assembly instructions inside the kit pack.

**ACCESSORIES**

TYPE	PUMP	DRW. N°	DIMENSIONS (mm)				
			DN	PN	H	A	B
G/SVH DN25 PN25	1SV - 3SV	1	25	25	180	524	744
G/SVH DN32 PN25	5SV	1	32	25	180	521	748
G/SVH DN40 PN25	10SV	1	40	25	185	557	756
G/SVH DN50 PN25	15SV - 22SV	1	50	25	195	637	772

## VICTAULIC® COUPLINGS KIT (V SV) MAXIMUM OPERATING PRESSURE 6900 kPa

The single Kit includes: One cast iron Victaulic® coupling with one AISI 316L stainless steel weld-on or threaded sleeve with EPDM or FPM gasket.

The double Kit includes: Two cast iron Victaulic® couplings with two AISI 316L stainless steel weld-on or threaded sleeve with EPDM or FPM gasket.

# **TECHNICAL APPENDIX**

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (\text{NPSH}_r + 0.5) + h_f + h_{pv} \quad \textcircled{1}$$

where:

- $h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.
- $h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.
- $h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.
- $h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the Pv vapour pressure and the liquid's specific weight.
- 0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°C)	20	40	60	80	90	110	120
Suction loss (m)	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000
Suction loss (m)	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables at pages 256-257 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 25 m<sup>3</sup>/h

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SVG075T pump whose NPSH required value is, at 25 m<sup>3</sup>/h, di 2 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula  $\textcircled{1}$  with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 3,9

The relation is therefore verified.

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_a\_th

The table is valid for the Hazen Williams coefficient  $C=100$  (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara, and Vogel range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara and Vogel products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

**FURTHER PRODUCT SELECTION AND DOCUMENTATION**

**Xylect**

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every user have a My Xylect space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're 12,000 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
